## **DETAILED ACTION**

In view of Applicant's arguments, the Examiner has decided to issue a non-final office action to how the housing or body with memory device explicitly disclosed.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 is rejected under 35 U.S.C. 102(b) as being anticipated by DE patent 202 11 121 U1).

DE patent device discloses an interface apparatus with a rotational mechanism at 23 or see claim 26 for connecting with an interface port at 21 in an electronic product, the interface apparatus comprising; a body at comprising a memory module (see abstract); a connector for connecting an interface port; and a rotational mechanism at for linking the body and the connector. Furthermore the term "for" with the accompanied terms as recited in the claims are considered as functional limitations and does not add any patentability to claims limitations because it's narrative in form. In order to be given patentable weight, a functional limitation must be expressed as a "means" for performing the specified function, as set forth in 35 USC 112, 6<sup>th</sup> paragraph, and must be supported by recitation in the claim of sufficient structure to warrant the presence of the fuctional language. In re Fuller, 1929 C. D. 172; 388 O.G. 279.

Application/Control Number: 10/605,237

Art Unit: 2839

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2-6, 8, 10-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over DE patent 202 11 121 U1) in vie of Stout et al (US006612874B1).

In regard to claim 2-3, DE device discloses the aforementioned limitations, but fails to explicitly disclose the memory module being volatile or the use of the USB interface. Stout's device discloses the use of volatile memory or the use of the USB interface. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the non-volatile memory module or the USB interface in order not to save the information when the power is turn off or to allow connection of different peripherals to the memory device using hubs in DE device.

In regard to claim 4, DE and Stout's devices disclose the aforementioned limitations, but fails to disclose the connector having IEEE 1934. It would have been obvious to one having ordinary skill at the time the invention was made to have connector design in accordance to IEEE 1934, since it has been held to be within the general skill of worker in the art to select known material on the basis of its suitability for the intended use as matter of obvious design choice. In re Leshin, 125 USPQ 416. It

Application/Control Number: 10/605,237

Art Unit: 2839

would have been obvious to one having ordinary skill at the time the invention was made to have connector design in accordance to IEEE 1934 in order to meet the system specification and design in DE device.

In regard to claims 5-6, 8, 10-13, DE and Stout's devices disclose the aforementioned limitations, but fails to explicitly disclose the exact number of degrees of freedom of movement in the rotation which is an inherent feature. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have a number of degrees of freedom of movement in the rotation, since it has been held that discovering an optimum value of result effective variable involves only routine skill in the art. IN re Boesch, 617 F2d 272, 205 USPQ 215 (CCPA 1980). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have a specific number of degrees of freedom of movement in the rotation in order to meet the system design and requirement.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jean F. Duverne whose telephone number is (571) 272-2091. The examiner can normally be reached on 9:00-7:30, Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, TC Patel can be reached on (571) 272-2098. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
